

RGBW

Product Installation Notes

Please read before installation!

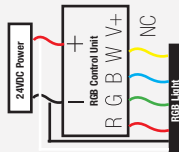

Aqualux RGBW products require particular wiring & control gear

Aqualux RGB lights are wired via separate power & control signal circuits. This is done to minimise potential EMI effects and to allow for a separate power cable that can be sized according to the system load.

Key Points

- 24V DC to RGB Controller
- 24V DC to RGB Light
- RGBW Signal to RGBW Light

24VDC	RGBW Controller	Light Fitting Cable
	Red	Red
	Green	Green
	Blue	Blue
	White	Yellow
-	-	Black (24V DC Negative)
+	+	White (24V DC Positive)
